¿Qué es el Índice H?

El índice h es un sistema propuesto por Jorge Hirsch, de la Universidad de California, para la medición de la calidad profesional de físicos y de otros científicos, en función de la cantidad de citas que han recibido sus artículos científicos.

Un científico tiene índice h si ha publicado h trabajos con al menos h citas cada uno.

Jorge E. Hirsch

Ph.D. University of Chicago, 1980, PROFESSOR

Research: Condensed Matter

Analysis and Design of the Integrated Double Buck-Boost Converter as a High-Power-Factor Driver for Power-LED Lamps

Author(s): Alonso, JM (Marcos Alonso, J.)¹; Vina, J (Vina, Juan)¹; Vaquero, DG (Gacio Vaquero, David)¹; Martinez, G (Martinez, Gilberto)²; Osorio, R (Osorio, Rene)²

Source: IEEE TRANSACTIONS ON INDUSTRIAL ELECTRONICS Volume: 59 Issue: 4 Pages: 1689-1697 DOI: 10.1109/TIE.2011.2109342 Published: APR 2012

Times Cited: 0 (from Web of Science)

Exe Citation Map

Abstract: In this paper, an integrated double buck-boost (IDBB) converter is proposed as a high-power-factor offline power supply for power-LED lamps. The IDBB converter features just one controlled switch and two inductors and is able to supply a solid-state lamp from the mains, providing high power factor and good efficiency. In this paper, the IDBB converter is analyzed, and a design methodology is proposed. It is demonstrated that, with a careful design of the converter, the filter capacitances can be made small enough so that film capacitors may be used. In this way, the converter mean time between failures can be made as high as that of the solid-state lamp. A design example for a 70-W converter supplied from a 230 V/50 Hz mains for street lighting applications is shown. Finally, experimental results from a laboratory prototype are also presented.

Citation Mapping Setup for Literature Record

Citation Mapping Help | Close Citation Map

Use this screen to create a citation map for the record named in the title bar above (the target record) — you can map forward, backward, or both forward and backward citations for the target record — you can also select the depth or number of generations of citation to map

Select Direction:

Choose Forward to see records that cite the target record, choose Backward to see records the target record cites - to see both types, choose Forward and Backward

Select Depth: 1 Generation

Select the number of citation generations you want to see in the map you are creating — the records that directly cite or are directly cited by the target record are the first generation, records citing records that cite the target record and records cited by records cited by the target record are the second generation, etc.

Warning: Selecting 2 Generations may cause the map to time out due to the large numbers of records being retrieved. To improve performance when selecting 2 Generations select, Forward Only or Backward Only not both.

Ejercicios de autoevaluación

- 1. buscar los documentos de la institución preferida
- 2. crear un reporte de citas para saber cuántos documentos publican al año y cuántas citas reciben al año esos trabajos
- 3. hacer un análisis de los resultados para saber sus áreas temáticas más fuertes y sus áreas de oportunidad
- 4. seleccionar los 20 trabajos más citados y exportarlos a su perfil de End Note Web
